

# Mi9 iMerchant

A highly-sophisticated module that streamlines both the shipping and receiving process.

## Supercharging the Retail Experience with iOS devices

All types of inventory movement are managed more efficiently and accurately, in real-time, at the store level, or in the warehouse using iOS devices. Mi9 iMerchant has been designed to answer the needs of retail users, so that they can use the application at their convenience.

## More Productive Workforce

Designed to cut hours off the receiving process, the solution streamlines product movements as employees complete tasks faster and more accurately, and the information is available immediately for consumption by corporate systems.

## Smart Decision Making

Mi9 iMerchant simplifies the incorporation of real-time information into retail processes, providing a true picture of performance. This innovative technology allows Mi9 Merchant to provide a real-time sales and transactions picture for more accurate results.

## Effective Warehouse and Store Management

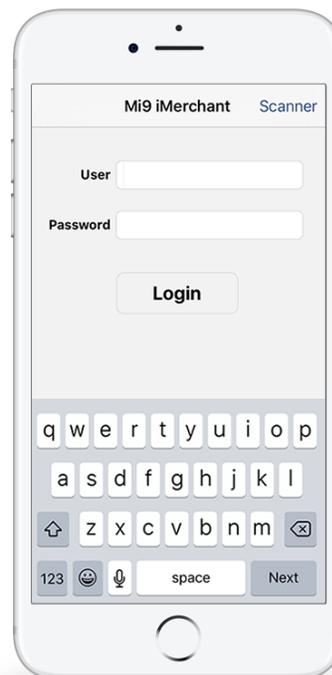

Mi9 Merchant contains a fully-integrated warehouse management system, which interfaces with automated sortation systems, easily supports flow through, cross dock and storage processing. Mi9 iMerchant also allows store personnel to review, modify, and confirm transfers in just a few clicks.

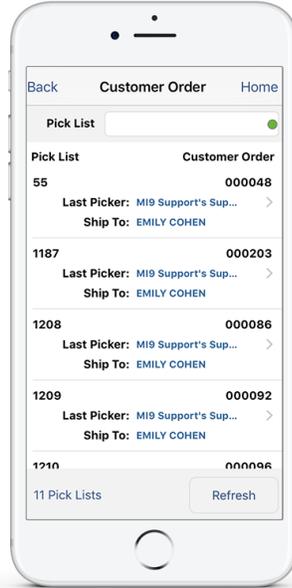

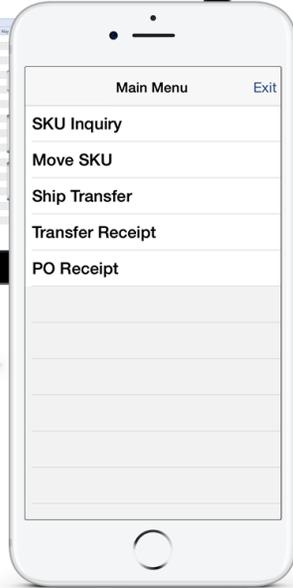

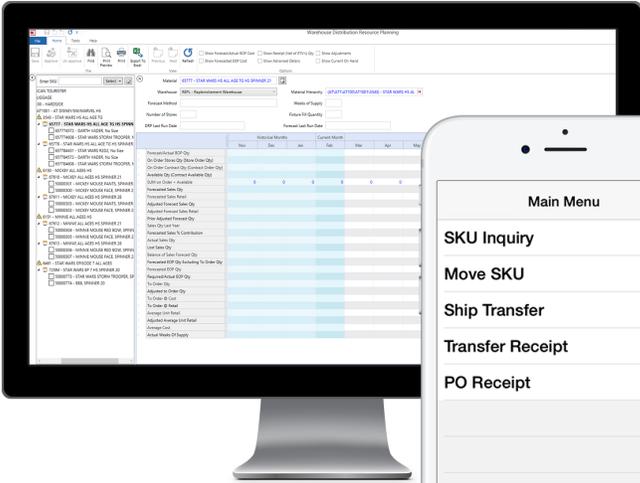

## Mi9 iMerchant is an add-on module of Mi9 Merchant that enables store associates to effectively manage inventory movement on iOS devices.

Mi9 iMerchant eliminates delays inherent in inventory updates between stores and corporate systems, and makes the shift to paperless processes easier than ever. Elevate the customer experience by making the mobile inventory management completely hassle-free. Freeing associates from back-office tasks enables them to spend more valuable time with their customers – resulting in better overall productivity and customer service. Instead of moving the merchandise to a workstation for data entry or handwriting information and keying it in later, store associates can carry their iPad/iPhone devices to the merchandise and directly conduct scans.

Mi9 iMerchant is the ideal tool for retailers trying to save time and reduce errors. Received shipments can also be immediately reflected at the corporate level, which improves both reporting and

retail analytics. Using an iPhone or iPad, retail store associates can complete tasks with their own devices and respond to customers' needs in a modern way. Mi9 iMerchant is Bring your Own Device (BYOD) compatible, meaning that no sensitive corporate data is ever stored on the device. Mi9 iMerchant provides retailers with advanced analytics capabilities that centralize information at the corporate level and drive all analysis and inquiries from one unified repository. Store and corporate users submit queries and pull reports from the same centralized database, and Mi9 iMerchant ensures that this information is as timely and accurate as possible.

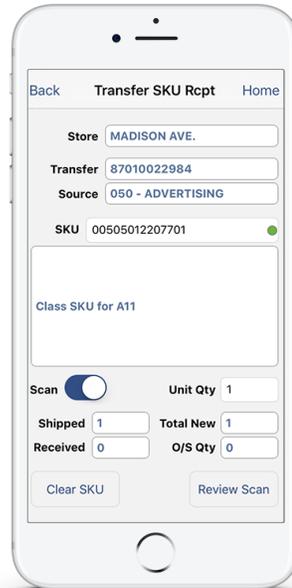

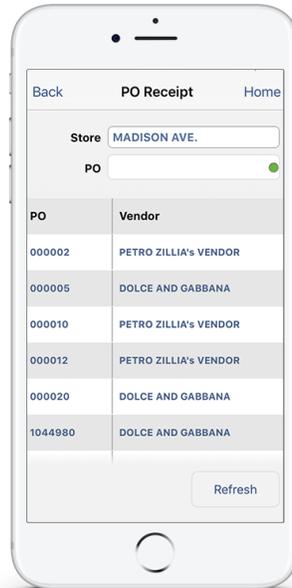

### iMerchant Store Features

- Transfer Shipment (Ship Transfer)
